## Application:

Ammonium tetrachloropalladate(II) is one of the preferred complexes, which are used for the preparation of palladium metallic particles. In addition, it forms Pd-creatinine complexes, which find use in the field of catalysis, and semiconductors. Colloidal

---

palladium nanocatalysts and metal polymer catalyst systems can be prepared from ammonium tetrachloropalladate.

**Package:**

Usually packed in 25kg/drum, and also can be do customized package.
